FT **FeverTrack**

Quarantine & Treatment Centre

Daily temperature tracking, doctor rounds, discharges and outcome monitoring for a 74-room facility. Choose a role to sign in (no password in this prototype).

🩺

Nurse

Nurse Priya Nair

Sees who still needs a temperature today and records readings.

👨‍⚕️

Doctor

Dr. Arjun Mehta

Visit queue (only patients with today's temperature), treatment notes, discharge sign-off.

📦

Admin Staff

Rahul Desai

Bed board, admissions into free rooms, discharges approved by doctors.

📊

Head Doctor

Dr. Kavita Rao

Everything a doctor can do, plus the outcomes dashboard vs. the 85% benchmark.

Suggested demo flow

1. **Nurse** → "To measure" tab → record a temperature (try 37.2, 38.6, 41, or 50 to see validation). Recording twice on the same day is blocked.
2. **Doctor** → "Ready for visit" only lists patients whose temperature is in; "Awaiting temperature" patients can't be visited. Complete a visit; approve discharge for an eligible patient.
3. **Admin** → bed board → "Discharges" tab → discharge the approved patient → room frees → admit a new patient into it.
4. **Head Doctor** → dashboard: cure rate vs. 85%, mortality vs. 15%, compliance, discharge delay. Record 2 deaths to see the mortality alert.

5. Use **"End day"** to roll to tomorrow: missed readings/visits are counted and the lists reset.
